

1. What is extinction?
 - d. A procedure in which reinforcement for a previously reinforced behavior is no longer provided, resulting in a decrease in that behavior.
2. An extinction burst is:
 - c. An initial increase in the intensity and frequency of the behavior undergoing extinction.
3. You have observed spontaneous recovery:
 - a. If extinguished behavior temporarily re-occurs after a period of time has passed.
4. Which of the following 3 items are factors that influence the effectiveness of extinction (select all that apply)?
 - a. Consistency of withholding reinforcement.
 - b. Reinforcement of alternative desirable behaviors.
 - e. Extinguished behavior should never be reinforced.
